In such a system, the primary steam source is a single set of feedwater pumps and no primary coolant pumps are required. Aviator is a free simulation software for flight simulators that can also be used for nuclear power plant simulators, intended to create full-scope 3D simulation models of a nuclear power plant. Aviator can model the entire nuclear plant, consisting of multiple reactor units. It was originally created by the non-profit Excelergy research group, but is now hosted at the Office of Nuclear Energy within the US Department of Energy. Aviator is available free for non-commercial use, and builds and simulates simulation models using the EPCglobal model, SimExpert software and a number of component technologies. 4Sim incorporates the SimExpert simulation software of ACCUPLANE into one application. 4Sim is designed to model radiation hazards at nuclear facilities, allowing simulators and regulators to evaluate a site's status and security prior to design certification. 4Sim also allows for the qualification of simulator hardware and software as it becomes available. 4Sim can model a plant site, with integration of a wide-range of plant components. 4Sim is part of the EPCglobal 4Sim + Core family, which allows modelers to reproduce and compare 4Sim models to both 4Sim and SimExpert models. 4Sim is available as a free download. Fukushima has been used to study the performance of four systems of emergency diesel generators. It simulates the plant with a microsimulation model at a real fuel type and temperature. The simulation model is 1:1 reproducible. Sagesys can model and simulate the operation of power plants and is a cloud-based software that runs on Windows Azure Platform. The application includes a collection of modules, both single-function modules and multi-function modules. Single-function modules may include the modeling of a single component such as the steam turbine, turbines, pumps, compressors, power transformers and other components. Multi-function modules may include the modeling of a f678ea9f9e
